

# Where do we go to grapple with the critical issues of our time?

***We have Mission Control rooms for space exploration, war games and business strategy...***

***Why not a Mission Control for Sustainability?***

**World Resources Simulation Center (SIMCenter)** is a collaborative, immersive, surround visualization facility.

A SIMCenter is a place where you can literally “see” the problems and solve them working together.

A SIMCenter enables you to better understand past trends, visualize future projections, compare the costs and benefits of all options.

A SIMCenter turns data into visual understanding using dashboards, GIS maps, trends and best practices. SIMCenters accelerate design options.

***What’s missing?*** A place to convene where our engineers, business leaders, educators, policy-makers and non-profits can work together.

All problems are interconnected.  
**SIMCenters help us to solve them.**

**SIMCenter mission:**

***Visualizing sustainable solutions to global and local problems so we make informed choices quicker.***  
*...because we are running out of time!*

*If interested in developing a SIMCenter visualization facility at your university, corporate strategic facility, or city/state planning department contact Peter Meisen: [peter@wrcs.org](mailto:peter@wrcs.org) 619-234-1088*
